

A photograph of a woman from behind, jogging on a wooden pier. She is wearing a pink tank top, black shorts, and pink running shoes. The pier has a metal railing and leads towards a bright horizon over water. The sky is a warm, golden color.

CardioDrive

Complete Heart Health

CARDIOVASCULAR CARE: THE MOST IMPORTANT COMMITMENT

Your heart is the size of your fist and the hardest working muscle in your body. Your heart started beating about three weeks after you were conceived. If you live to be 70 your heart will have beaten two and a half billion times. Each heartbeat pumps blood around the body, pushing it from the left heart chambers, through arteries of ever-decreasing size, finally reaching the capillaries in all parts of the body.

As marvellous as this system is, it is very vulnerable to damage

from the things we do to it, like smoking, eating an unhealthy diet or putting it under stress. Or you may be born with a heart condition. When your heart's functions become compromised, this is known as cardiovascular disease, a broad term that covers any disorder to the system that has the heart at its centre. The first signs of cardiovascular diseases are invisible to our senses. Initially, we are unaware of the progression of the disease.

A normal function of the cardiovascular system is vital for the optimal operation of absolutely all human organs and systems.

One of the main risk factors is an unhealthy lifestyle, which can put your cardiovascular system in danger. The harm caused by destructive habits and other risk factors may develop the following symptoms of a cardiovascular disorder:

- ▶ increased blood pressure,
- ▶ heart rhythm disorder,
- ▶ atherosclerosis,
- ▶ weakness in the venous valves and blood vessel walls,

- ▶ blood vessel valve damage,
- ▶ increased thrombosis.

Individually these symptoms may not cause any problems, but they actually build up and may aggravate the disease. Medications usually are expensive and have various undesired side effects. Bio active dietary supplements are the perfect alternative to manage cardiovascular health and fight against these devastating diseases without any side effects.

Cardiovascular diseases are the leading cause of death globally. Together they resulted in 17.3 million deaths in 2013 up from 12.3 million in 1990. It is also estimated that by 2030, over 23 million people will die from cardiovascular diseases each year.

CARDIOVASCULAR DISEASES CLAIM MORE LIVES THAN ALL FORMS OF CANCER COMBINED.

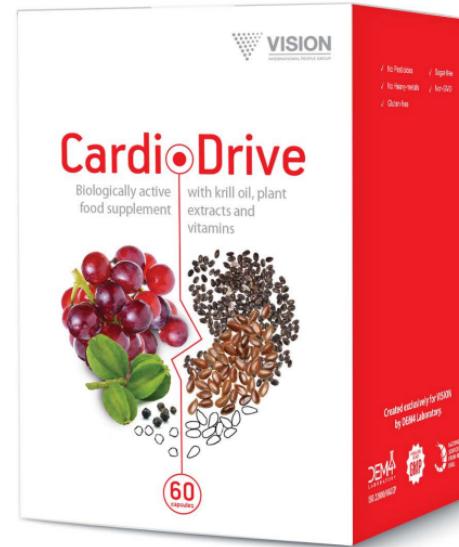

Heart support products used on a daily basis can prevent various heart diseases and reduce mortality up to 3 times.

SUPER PRODUCT REDEFINING HEART HEALTH

Inspired with the success of LiveLon+' super product we developed **CardioDrive** for heart health. It contains maximum amount of purified natural substances. To create this super health enhancer we used only ingredients in their best absorbable form, free of preservatives, gluten and GMO. It is an extremely strong and potent product with maximum bioavailability and effectiveness. We

finish the formula with extensive quality testing, confirming the SUPER action and efficiency.

CardioDrive was developed by Vision in DEM4 Laboratory in cooperation with Professor Martin Middeke, one of the leading cardiology specialists in Europe. Two leading European manufacturers are used for its production.

Traditional heart health medications target removing disease symptoms, while CardioDrive has a long term action preventing the causes.

MAIN BENEFITS

Helps normalising the blood pressure

Thins the blood and improves blood circulation

Reduces inflammation in blood vessel walls

Improves blood lipid profile

Optimises cardiac muscle work

Assists regulating heart rhythm

ADDITIONAL BENEFITS

Has a strong antioxidant action

Helps normalising sugar content in the blood

Overall calming effect on the nervous system

Speeds up metabolism

Assists cleansing the body and protects the liver

Improves digestion

Strengthens the immune system

TWO FORMS OF PERFECTION

Two different forms of ingredients in two capsules can achieve that one couldn't – ultimate heart health aid. Both forms of

concentrated essential nutrients are extremely important to support the cardiovascular system.

'Solid' capsule contains water-soluble nutrients

'Fluid' consists of liquid fat-soluble ingredients, such as vitamins, coenzyme Q10, and Omega-3 fatty acids

Proanthocyanidins, the main active substance, improve blood circulation and microcirculation, normalise blood lipid profile and help thinning it

Water or fat soluble ingredients are grouped in two different capsules

Affects both water and lipid parts of the cell

All the ingredients reinforce each other's action with synergistic effect

The ingredients provide extensive range of omega fatty acids of animal and plant origin

Two time tested medicines – natural and ayurvedic

TECHNOLOGICAL ADVANTAGES

SOLID CAPSULE

The hard capsule shell: hydroxypropyl methylcellulose (HPMC, hypromellose), transparent, made of vegetable substances without animal gelatine (suitable for vegetarians).

HPMC capsule has low moisture content (in comparison with gelatine), does not react with active components, and is very resistant to external environmental effects (temperature, humidity, etc.).

FLUID CAPSULE

New Licaps Fusion Technology is a major advancement in liquid-filled capsules. Two-piece body and cap hermetically sealed to form a leak-proof, perfectly airtight, one-piece capsule. The one-piece capsule cannot be opened without visible damage. Licaps shell matrix is highly impermeable to atmospheric moisture and oxygen. Provides a high level of protection from degradation of sensitive compounds. Enhanced efficiency, bioavailability and fast action. No special additives requirements such plasticizers or paraben. Licaps capsules are 32% more bioavailable than a similar liquid in softgels.

SOLID CAPSULE

Grape seed extract

No body system is better situated to reap the benefit of antioxidants and anti-inflammatory molecules in grapes than the cardiovascular system. Proanthocyanidins, the main active substance, improve blood circulation and microcirculation, normalise blood lipid profile and help thinning it. Grape phytonutrients as resveratrol lowers your blood pressure, improves elasticity in blood vessels, normalises anti-inflammatory response and helps to prevent Alzheimer's disease.

Allium sativum extract

In addition to the ability of garlic to help prevent our blood vessels from becoming blocked, this allium vegetable may be able to prevent clots from forming inside of our blood vessels. Garlic is a very good reducing levels of oxidising free radicals in the bloodstream and can have a profound effect on preventing cardiovascular diseases.

Hawthorn leaf and flower extract

Hawthorn can improve the amount of blood pumped out of the heart during contractions, widen the blood vessels, and increase the transmission of nerve signals. It relaxes the heart while supporting its ability to produce and sustain energetic output.

Ginseng extract

It is an adaptogen that make you more resilient to mental, physical, and environmental stress. Ginseng helps in lowering high blood pressure, increases low pressure normalising it, improves blood circulation, optimises heart muscle function, and thickens the blood. As antioxidant, it protects the heart and blood vessels from the harmful effects of free radicals.

Green tea extract

Green tea is loaded with substances that reduce the formation of free radicals in the body, protecting cells and molecules from damage, relax blood vessels, and reduce the risk of coronary heart disease. It enhances metabolism and assists normalising the level of cholesterol and glucose in the blood.

Beetroot extract

Beetroot is valued for its support in detoxification and helping to purify your blood and your liver. It may help relax and dilate your blood vessels, improving blood flow and lowering blood pressure. Beetroot is also known to help fight inflammation and prevent numerous chronic diseases.

Arjuna bark extract

It is a cardiotonic agent. It improves coronary blood supply, increasing heart's endurance and diminishing abnormal heart rhythms. Arjuna bark widens the blood vessels, improves blood circulation, and lowers increased blood pressure. It also enhances blood vessel walls, thickens the blood, improves lipid composition, and ensures anti-inflammatory and antioxidant effects. Moreover, it improves cognitive functions and helps to relieve stress and nervousness.

Black pepper extract

One of the most important ingredients is black pepper extract which increases blood supply to our gut, increases the emulsifying or digestive content of our gut and boosts the active nutrient transport ability of our digestive system. It amplifies the capability to absorb the nutrients and keep them from becoming waste products and expelled from the system.

Garden sage leaf extract

Several studies have proved that sage leaf has anti-hyperglycemic properties which lower blood glucose levels by blocking the release of stored glucose from the liver. It also improves blood circulation, enhances the blood lipid composition and diminishes inflammation. The antioxidants in sage reverse the signs of ageing such as wrinkles, fine lines, and age spots.

Solid: Grape powder extract, Beetroot extract, Green tea extract, Garlic powder extract, Ginseng (Panax) dry extract, Hawthorn leaves and flower dry extract, Arjuna bark extract, Sage leaf extract, Black pepper extract.

FLUID CAPSULE

Krill oil

The omega-3 in krill oil is attached to phospholipids that increase its absorption and contains astaxanthin, a potent antioxidant—almost 50 times more than is present in fish oil. EPA and DHA acids in krill oil help reduce risk factors for heart disease, have strong anti-inflammatory action, and lower the risk of heart attack, stroke, and abnormal heart rhythms in people who have already had a heart attack.

Vitamin E

CardioDrive contains natural vitamin E, very different from synthetic one that is found in the most popular supplements.

Synthetic substance is only about 12% as potent as natural.

Latest studies show that taking vitamin E daily may lower the risk of cardiovascular diseases by 40-60 percent! It protects the capillary walls from damage, improves collateral blood circulation (in the heart), stimulates muscle strength, and has unique anti-inflammatory and antioxidant properties.

Coenzyme Q10

Coenzyme Q10 is crucial for the vital cell activities. It is a catalyst that launches the process of producing energy. The life-cycle of cells also depends on energetic activity. The amount of coenzyme Q10 in the blood is an independent indicator of the heart's condition. It helps assure circulatory health, and supports optimal functioning of the heart muscle.

Vitamin A

Vitamin A may reduce the risk of heart disease. It works with vitamin E to reduce the oxidation of LDL-cholesterol, which lowers the risk of atherosclerosis and coronary heart disease and slows down the ageing processes in our bodies.

Flax seed oil

Flax seed oil contains essential unsaturated fatty acids relative to omega-3 fatty acids. Scientific evidence indicates that those who use flaxseed oil are less likely to suffer a fatal heart attack and it reduces high blood pressure.

Vitamin D3

Researchers have pointed out that increasing levels of vitamin D3 among the general population could prevent chronic diseases that claim nearly one million lives throughout the world each year. It is very important for reducing hypertension, atherosclerotic heart disease, heart attack, and stroke.

Fluid: Krill oil, Flax seed oil, Coenzym Q10, Vitamins A, D3, E.
