

INGREDIENTS

KUDZU (*PUERARIA LOBATA*) is traditionally used as a natural remedy for alcohol dependence, considerable reduction of craving for alcohol, and preventing hangover. Kudzu's ability to reduce alcohol dependence has been proved by scientific research. Besides, kudzu contains phytoestrogen puerarin, whose antioxidant effect is 100 times stronger than that of Vitamin E.

ST JOHN'S WORT protects the liver, has an antidepressive, sedative, and chologogic effect. If taken for a long time, St John' wort can produce a firm disgust to alcohol.

HORSERADISH facilitates bile outflow, clears the liver of toxins and alcohol decay products, helps to quickly sober up.

MILK THISTLE prevents alcohol damage to the liver, blocs alcohol intoxication, helps to quickly remove alcohol decay products from the liver. Raises protective capability of the liver against infections and toxins. Used to treat hepatitis, cirrhosis, toxic lesions of the liver.

ZINC, MAGNESIUM, VITAMIN B6. Zink is effective in preventing some psychological disorders resulting from alcoholism. Magnesium and vitamin B6 stimulate production of energy in cells, raise psychological and physical stamina. Combined, these ingredients intensify metabolism and fight stress.

VITAMIN C is a powerful antioxidant. It normalizes oxidative-restorative processes, stimulates metabolism, tones you up.

- ✓ Helps stop binges, and avoid them afterwards
- ✓ Considerably reduces frequency of drinking and amount of alcohol consumed
- ✓ Fights against depression and stress related to "abstinence syndrome"

**Only the Best.
Only from Europe.**

TO DEFEAT THE DISEASE

The problem of alcoholism is urgent for millions of people all over the world. Alcoholism is a reason behind deteriorating health, lesion of liver, early death, growing number of crimes, injuries, and accidents, family disorders, lowering of social status, psychological disorders, and so on—down to total degradation of a person. So, what are the symptoms of the disease, and are there any chances to defeat this evil dependence?

Alcoholism is a progressive disease characterized by pathological dependence on ethanol. The disease develops in several stages. At the first stage there is a psychical dependence—a person drinks trying to lift spirits, to relax, to raise self-confidence.

Gradually, a person consumes more and more alcohol, and the second stage comes—the stage of physical dependence, when a person drinks every day and with binges, forgetting about family, work, and affairs. Abstaining from alcohol causes abstinence syndrome which first manifests as a normal person's heavy hangover: thirst, dry mouth, nausea, headache, dizziness, shatterness, unpleasant feeling around the heart, bad mood. Then come an irresistible desire to freshen the nip, insomnia, fever, excessive sweating, convulsions, auditory and visual hallucinations—what is called delirium tremens, or alcoholic mania.

At the third stage of alcoholism the total degradation of a person comes, accompanied by atrophic processes in the brain, alcoholic dementia, epileptic seizures, and involuntary urination.

It is the new product of Vision Company **HeparD** that will help to get rid of alcohol dependence and relieve hangover.

DRUNKENNESS WON'T BE TOLERATED!

HeparD's unique formula lets it work in two directions: struggling with alcohol dependence, and preventing hangover syndrome. This double effect is due to the “magic” of kudzu, a component of the supplement. Kudzu, a plant in the genus *Pueraria* had been used as far back as in ancient China as a remedy for alcoholism and

hangover. Modern research show that kudzu contains isoflavones, which slow down the activity of the ferment breaking down the alcohol. This way, **HeparD** considerably reduces the need for alcohol. Its natural ingredients prevent depression, often following abstinence from alcohol. When taken regularly, **HeparD's** biologically active agents accumulate in the organism, relieve of pathological craving for alcohol and hangover syndrome.

HeparD stabilizes arterial pressure, prevents arrhythmia, provides muscle and emotional relaxation. Taking **HeparD** before drinking, one can avoid hangover with such unpleasant symptoms as headache, dry mouth, nausea, thirst, tremor, irritation, red eyes, loss of appetite.

HeparD produces no side effects when taken together with alcohol.

OUR RECOMMENDATIONS

HeparD is recommended to those who:

have a craving for alcohol

want to drink less

want to considerably reduce frequency of alcohol consumption

suffer from hangovers

don't drink any more—to avoid break-downs and binges

suffer from abstinence syndrome
