

INGREDIENTS

CALCIUM participates in the formation of tissues of bones, teeth, nails and hair. It plays an important part in transmitting nerve impulses, and influences muscles' performance, facilitating them to contract and relax. Thanks to calcium, muscles become stronger and act as a frame for bones and spine, simultaneously reducing the risk of fractures and bone deformation.

VITAMIN K2 regulates the amount of calcium in the body, prevents its penetration into tissues, where it's not supposed to be present, i.e. directs calcium straight to the bone tissue. It also facilitates formation and restoration of the bone tissue and actively participates in prevention of osteoporosis. Vitamin K2 protects vessels and heart from calcium sedimentation.

VITAMIN D3 provides for the ultimate assimilation of calcium. It facilitates normal growth and development of skeleton, prevents osteoporosis, relaxes strained muscles. Helps to stay fit.

SHILAJIT EXTRACT contains more than 30 macro- and microelements, vitamins and amino acids that altogether promote full absorption of calcium in the body, as well as bones mineralization.

VITAMIN B6 maintains structure of bones and tissues and helps retain calcium in the body.

VITAMIN B12 is important for bones formation, improves their density. It also has an impact on muscles' growth, as it participates in protein metabolism.

VITAMIN B9 (folic acid) is just indispensable for proper formation of the fibrous collagen frame, that prevents deformation and crumbliness of bones, helps them stay firm.

OsteoSanum

Product for active
prevention
of osteoporosis

OsteoSanum ingredients maintain proper balance of calcium and direct it straight into the bone tissues, thus protecting heart and blood vessels from calcium sedimentation. As a result they:

- ✓ Prevent osteoporosis
- ✓ Reduce the risk of fractures and deformation of bones and spine
- ✓ Improve bone structure and mineral density
- ✓ Fortify muscular system
- ✓ Improve condition of hair, nails and teeth

*OsteoSanum—*for strong bones

WHY IS CALCIUM DEFICIENCY DANGEROUS?

According to the medical statistics every 6th person suffers from the shortage of calcium. Sooner or later it can lead to osteoporosis—a disease that causes thinning of the bone tissue and skeleton deformation.

Calcium is in charge of our health and beauty. Shiny hair, strong muscles, good posture, firm nails and thick lashes—all that is secured by calcium. However, even balanced nutrition doesn't guarantee timely and correct absorption of calcium by the body, as it absorbs only 20% of this vital microelement.

It is not always that specific calcium-containing food supplements are of any essential help. The point is, proper assimilation of this mineral requires special conditions, a sort of "road map", so to say. Otherwise, calcium will end up in a completely wrong place (on blood vessels' walls, for instance) and do more harm, than good. Calcium penetrates through cholesterol plaques on the blood vessels' walls, forming the insoluble compounds. As a result vessels lose elasticity, become fragile, and opening of the vessel reduces, which subsequently means that less oxygen and nutrients get into the body, increasing load on the heart.

Proper absorption of calcium is ensured by vitamins of the group D, vitamin K2 and Shilajit that contain the ultimate amount of micro- and macroelements, indispensable for proper absorption of calcium. However, not every pharmaceutical product can boast of such a rich composition.

BONE TISSUE PROTECTION

New revolutionary product **OsteoSanum** has been developed specifically as a remedy to prevent osteoporosis and saturate tissues with calcium.

Due to carefully selected ingredients OsteoSanum protects bones from destruction and fractures, and strengthens muscles.

OsteoSanum additionally contains vitamin D3 and recently discovered vitamin K2, as well as Shilajit extract for better and proper assimilation of calcium. Vitamin D3 promotes complete absorption of calcium, boosts mineralization of bone tissues and prevents deformation

of bones. Vitamin K2 acts as a regulatory substance and directs calcium precisely to those tissues that suffer from its shortage. Besides, vitamin K2 precludes sedimentation of calcium on vessels' walls and thus protects heart.

Shilajit extract accelerates the delivery of calcium into muscles and bone tissues and facilitates improvement of their mineral composition and structure.

Unique composition of natural product **OsteoSanum** creates balance of macro- and microelements in the body, which subsequently strengthens bones, fortifies muscles, improves posture and makes hair and nails healthy and beautiful.

OUR RECOMMENDATIONS

Target audience to take OsteoSanum:

- ✓ Men and women over 50
- ✓ Women in the period of menopause
- ✓ Women with low body weight and delicate constitution
- ✓ People who take hormonal preparations
- ✓ Men and women with endocrine diseases
- ✓ Those, who experience extensive physical loads
- ✓ Those, who had or have fractures
- ✓ Those, who smoke or consume alcohol (even in small amounts)
- ✓ Those, who don't keep any food regime or abuse diets with rich amounts of cellulose
- ✓ Those, who want to have strong bones, perfect posture, healthy teeth, nails and hair.
